### Cabin air filter CUK 26 023: W205 patent avoidance solution

For the current Mercedes-Benz C- and E-class, MANN-FILTER inserts the cabin air filter CUK 26 023, which deviates significant from the OE filter in its visual appearance.

#### What are the differences?

The white sword and the subsequent less pleat width are conspicuously (image 1).

The original filter has two holes at the sideband (image 2). In those holes do entry two pins, which are installed in the housing. This combination is patented.

MANN-FILTER located a patent avoidance solution with this sword. Although the less media surface, the IAM product can honor the promise of OE quality.

**Image 1:** The MANN-FILTER CUK 26 023 has a sword, so no pins do ingress.

**Image 2:** The OE filter has two holes. Two pins placed in the housing can ingress in the filter.

The MANN-FILTER CUK 26 023 is not rounded, fits ideally in the housing and so protects the passengers of the vehicle against harmful fine dust, awkward smell and noxious gas such as nitrogen dioxide (NO<sub>2</sub>).
